EDUCATION

University of Alberta

Bachelor of Science, Specialization in Computer Science

- Dean's Honor Roll 2023-24

Edmonton, Alberta

Sep 2021 – Dec 2025

IBM Professional Certificate

Generative AI Engineering

Online

Dec 2025 – Feb 2026

TECHNICAL SKILLS

Languages: C, C++, C#, HTML5, CSS3, Java, JavaScript, TypeScript, Python, SQL/NoSQL, XML

Databases: PostgreSQL, MySQL, MongoDB, Supabase, Firebase

Developer Tools: VS Code, IntelliJ IDEA, PyCharm, Android Studio, Git, Postman

Technologies/Frameworks: React, Angular, Vue, Django, Node.js, Flask, RESTful API, Spring Boot/Spring, Docker, Linux, JUnit, Selenium, PyTorch, TensorFlow, Tailwind, CI/CD, OpenAI/Generative AI, AWS Cloud

WORK EXPERIENCE

Fluenty

Jan 2025 – Apr 2025

Full Stack Developer

Edmonton, Alberta

- Developed and maintained a full-stack web platform using Django and React, integrating Google Calendar API and Google Meet API to enable real-time scheduling and backend data synchronization across user types.
- Built responsive, role-specific dashboards for 3 user types using React, HTML, CSS, and Tailwind, demonstrating strong analytical problem-solving and user-centered design principles.
- Implemented automated end-to-end tests with Selenium and maintained 90% code coverage, established CI/CD pipeline integrated with SonarQube ensuring system reliability and performance optimization.
- Deployed application using Docker on cloud infrastructure with Supabase for database management and authentication, managing complete software lifecycle from design through production support.

IMTAC

May 2024 – Jun 2024

Full Stack Developer Intern

Muscat, Oman

- Developed full-stack Employee Management System using Angular2+ and Spring Boot (Java), demonstrating proficiency across multiple programming languages and frameworks in a production environment.
- Integrated robust role-based access control (RBAC) and implemented secure authentication protocols using Spring Security, ensuring compliance with data privacy standards and protecting sensitive employee information.
- Designed and normalized PostgreSQL database schemas, optimizing relational structure to support scalable and maintainable data models tailored for employee records and permissions.
- Analyzed and optimized SQL queries and indexing strategies, achieving 30% reduction in query execution time through deep performance analysis and database tuning.

PROJECTS

World Cup Predictor | *Python, XGBoost, Scikit-learn, SQLite, Streamlit, Plotly, NumPy, Pandas* Jun 2026 - Jul 2026

- Engineered a custom Elo rating system from scratch across 49,000+ matches (1872–present), classifying 200+ tournament types into weighted stakes tiers, the strongest model feature at 46% importance
- Built a feature pipeline (rolling form, head-to-head win rates, Elo differentials, venue encoding) with strict time-based train/test splits to prevent data leakage; compared Logistic Regression and XGBoost, achieving 60.5% accuracy on the live 2026 group stage and 100% accuracy on completed Round of 32 knockouts.
- Designed a Monte Carlo bracket simulator (20,000 runs) that locks completed results as ground truth and simulates remaining fixtures, producing tournament win probabilities for all 32 teams and deployed via a Streamlit dashboard covering all 336 national teams with daily automated retraining

Rizztagram | *Python, Django, Heroku, HTML, CSS, JavaScript, PostgreSQL, RESTful APIs* Sep 2024 - Dec 2024

- Designed a distributed social networking platform using Django and JavaScript, enabling cross-server interactions and content creation through over 20 custom RESTful API endpoints; deployed on Heroku with automated CI/CD pipelines for efficient updates and monitoring.
- Partnered with four cross-functional teams to integrate services and enhance distributed networking capabilities, leveraging PostgreSQL for efficient backend data management and performance optimization.
- Led full-stack development within a collaborative team, implementing features such as authentication, pagination, and RESTful API integration, while optimizing database queries to improve response times by 20% for scalability.
